HPE to Acquire Juniper Networks to Accelerate AI-Driven Innovation

01/09/2024

Highly complementary combination enhances secure, unified, cloud and AI-native networking to drive innovation from edge to cloud to exascale

Accelerates long-term revenue growth and expands gross and operating margin; Expected to be accretive to non-GAAP EPS and free cash flow in year 1, post close

Advances HPE's portfolio mix shift toward higher-growth solutions and strengthens high-margin networking business

HOUSTON, Texas and SUNNYVALE, California – January 9, 2024 – **Hewlett Packard Enterprise** (NYSE: HPE) and Juniper Networks, Inc. (NYSE: JNPR), a leader in AI-native networks, today announced that the companies have entered a definitive agreement under which HPE will acquire Juniper in an all-cash transaction for \$40.00 per share, representing an equity value of approximately \$14 billion.

Combining HPE and Juniper's complementary portfolios supercharges HPE's edge-to-cloud strategy with an ability to lead in an AI-native environment based on a foundational cloud-native architecture. Together, HPE and Juniper will provide customers of all sizes with a complete, secure portfolio that enables the networking architecture necessary to manage and simplify their expanding and increasingly complex connectivity needs. Leveraging industry-leading AI, the combined company is expected to create better user and operator experiences, benefitting customers' high-performance networks and cloud data centers.

Through its suite of cloud-delivered networking solutions, software, and services including the Mist AI and Cloud platform, Juniper helps organizations securely and efficiently access the mission-critical cloud infrastructure that serves as the foundation of digital and AI strategies. The combination with HPE Aruba Networking and purposely designed HPE AI interconnect fabric will bring together enterprise reach, and cloud-native and AI-native management and control, to create a premier industry player that will accelerate innovation to deliver further modernized networking optimized for hybrid cloud and AI.

Upon completion of the transaction, Juniper CEO Rami Rahim will lead the combined HPE networking business, reporting to HPE President and CEO Antonio Neri.

“The combination of HPE and Juniper Networks will radically change the networking industry – not by eliminating products from either portfolio – but by creating greater choice in this sector”

FEBRUARY 6, 2024 • ANTONIO NERI, HPE PRESIDENT & CEO

“... let me be clear: our goal in embarking on this acquisition is not to eliminate products, but to offer enhanced choice and more innovation for all of our service provider, cloud provider and enterprise customers.”

FEBRUARY 6, 2024 • RAMI RAHIM, JUNIPER CEO

AI-NATIVE NETWORKING PLATFORM

We start with Experience-First questions

“How do we ensure every user, in every location, is getting a consistent experience?”

“Can the network adapt to fix issues before users even know they exist?”

EXPERIENCE-FIRST

“Does the network meet the needs of all necessary stakeholders?”

AI-NATIVE NETWORKING PLATFORM

The industry's only true AIOps

**EXPERIENCE-
FIRST**

AIOps

The diagram features a large white circle with a green 3D shadow at the bottom, containing the text 'AIOps' in green. Above it is a smaller white circle with a green 3D shadow containing the text 'EXPERIENCE-FIRST' in green. Both circles are set against a dark background with several concentric green arcs that create a sense of depth and motion.

Capacity, Coverage, Roaming SLE Provide Feedback to RRM

1. Poor user experience due to capacity, coverage & roaming is captured via the SLEs
2. Serves as a feedback loop to RRM to assess impact of channel, power changes
3. RRM makes changes both nightly & during the day to provide the best user experience

The screenshot shows the 'Radio Events' table, which provides a detailed log of radio-related events. The table includes columns for Date, A AP, Radio, Band, Channel, Channel Width, Power, and Event. A large green arrow points from the 'Capacity' and 'Coverage' metrics in the dashboard to this table, indicating that these metrics are derived from the events listed here.

Date	A AP	Radio	Band	Channel	Channel Width	Power	Event
02:42:21 PM, Mar 8	LD_Marvis	5 GHz	5 GHz → 5 GHz	64 → 60	20 → 20 MHz	11 → 11 dBm	Radar detected
04:25:41 PM, Mar 8	LD_JSW_AP	5 GHz	5 GHz → 5 GHz	136 → 52	20 → 20 MHz	10 → 10 dBm	Interference AP non wifi
06:06:07 PM, Mar 8	LD_MCB_AP	5 GHz	5 GHz → 5 GHz	36 → 60	20 → 20 MHz	10 → 10 dBm	Interference AP non wifi
07:05:08 PM, Mar 8	LD_Testbed_MD	5 GHz	5 GHz → 5 GHz	128 → 120	20 → 20 MHz	10 → 10 dBm	Interference AP non wifi
08:23:19 PM, Mar 8	LD_Testbed_MD	5 GHz	5 GHz → 5 GHz	120 → 108	20 → 20 MHz	10 → 10 dBm	Interference AP non wifi
08:45:51 PM, Mar 8	LD_Marvis	5 GHz	5 GHz → 5 GHz	60 → 64	20 → 20 MHz	11 → 11 dBm	Interference co-channel external
11:05:08 PM, Mar 8	LD_MCB_AP	5 GHz	5 GHz → 5 GHz	60 → 36	20 → 20 MHz	10 → 10 dBm	Interference AP non wifi
11:24:57 PM, Mar 8	LD_Marvis	5 GHz	5 GHz → 5 GHz	64 → 56	20 → 20 MHz	11 → 11 dBm	Interference co-channel external

Self-Healing – High Resolution AP Health Tracking

1. Goal: Mitigate End User Impact by Self-healing AP Radios

2. Trigger: Client Count Drop Anomaly Detection

- Multi-Dimensional Dip Detection
 - » Normal Beacon Rate is 10 beacon/sec => 600/min
 - » Number of Clients/AP/Hour
- Peer Correlation
 - » Compare with Site and Peer AP Baseline
- Temporal Correlation of Other Advanced Radio Level Stats

3. Action: Re-initialize Radio Interface

4. Validate Efficacy:

- PASS - Reinforce the Learning
- FAIL – Elevate to Tier-2 Recovery --> Possible RMA Investigation --> Auto RMA

Self-Driving with Automated Tickets for Proactive RMA

The screenshot displays the Juniper Mist AI interface. At the top, there's a 'LIVE DEMO' indicator and the 'MARVIS' logo. The main area shows a network map with various components like '0 Clients', '1 Layer 1', '13 Connectivity', '2 Gateway', 'Security', and 'Application'. A 'Send RMA' dialog box is open, asking for shipping address, email address, phone (optional), and comment (optional). Below the map, the 'AP HEALTH' section shows a table with columns for Site, APs, Details, and Date. The 'Details' column for the 'Live-Demo' site has a red box around the 'Replace AP' button.

Site	APs	Details	Date
Live-Demo	5c5b35:50:03:cf	Replace AP View More	Mar 12, 2022 10:50 AM

1. After performing AP self-healing actions, Mist AI determines a bad hardware
2. User intervention is needed to physically replace the AP

Marvis Detects and Determines Root Cause

I see that several users are having DHCP failures, let me post a Marvis Action

Marvis Minis – Only AI Native Digital Experience Twin

What is it?

Proactively simulates user experience digitally to instantly validate network configurations and find/detect problems without users being present on the network. Adds a new data source for Marvis.

Why does it matter?

-  Find and fix problems quicker – better uptime, saving time and \$\$
-  Best user experiences through proactive validation and remediation
-  Boost value from network with lower investment costs
-  Config changes are no longer a “black hole”: digitally validated and assured

Marvis Minis – Only AI Native Digital Experience Twin

How is it unique?

Fully integrated with Mist AI engine: provides a new data feed into Marvis, enriching all existing AI models

- ✓ Constant contextual learning: no need for manual configuration/adjustment
- ✓ Always on and validating network experience
- ✓ No additional hardware or software (part of Marvis VNA on existing network)
- ✓ Dynamic PCAP for failures of Digital Experience Twin user experience
- ✓ Adds/moves/changes validated in seconds vs. days
